

API GATEWAY PLATFORM PROPOSAL

Sheryl Bunton	Kara Achtermann	Paul Moore	Tony Maley
CIO, VP	Dir, Global EA	Dir, Global Infra	Architecture

Background / Problem(s) to solve

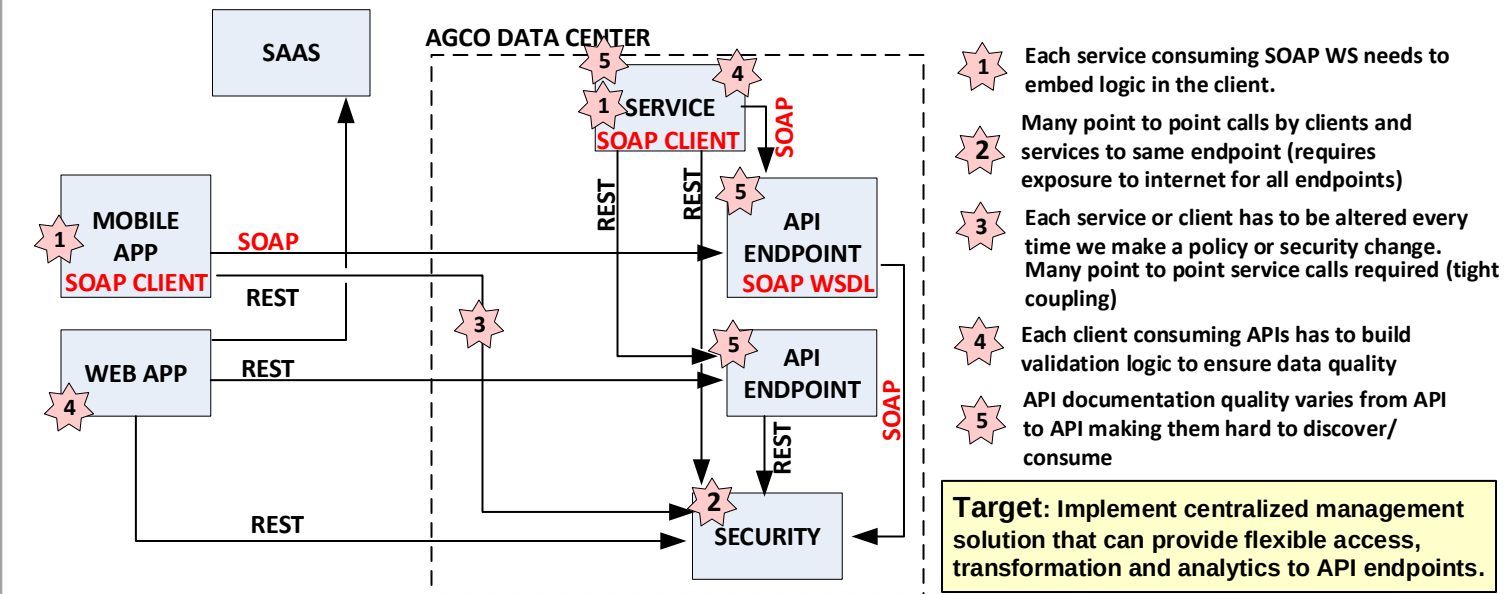

- A: How do we manage, monitor and apply changing policies for APIs in a time or cost effective manner?**
B: How do we document APIs in use and allow for developers to discover and consume these APIs?
C: How can we reuse existing SOAP or legacy services and expose in a modern RESTful way?

A: As we expose our APIs for consumption we need a way to manage and apply policies to APIs that will become the center of our mobile and machine based integration. Monitoring the usage to gauge application or feature success will become key in focusing efforts in this area as well as driving analytics based data for business improvement.

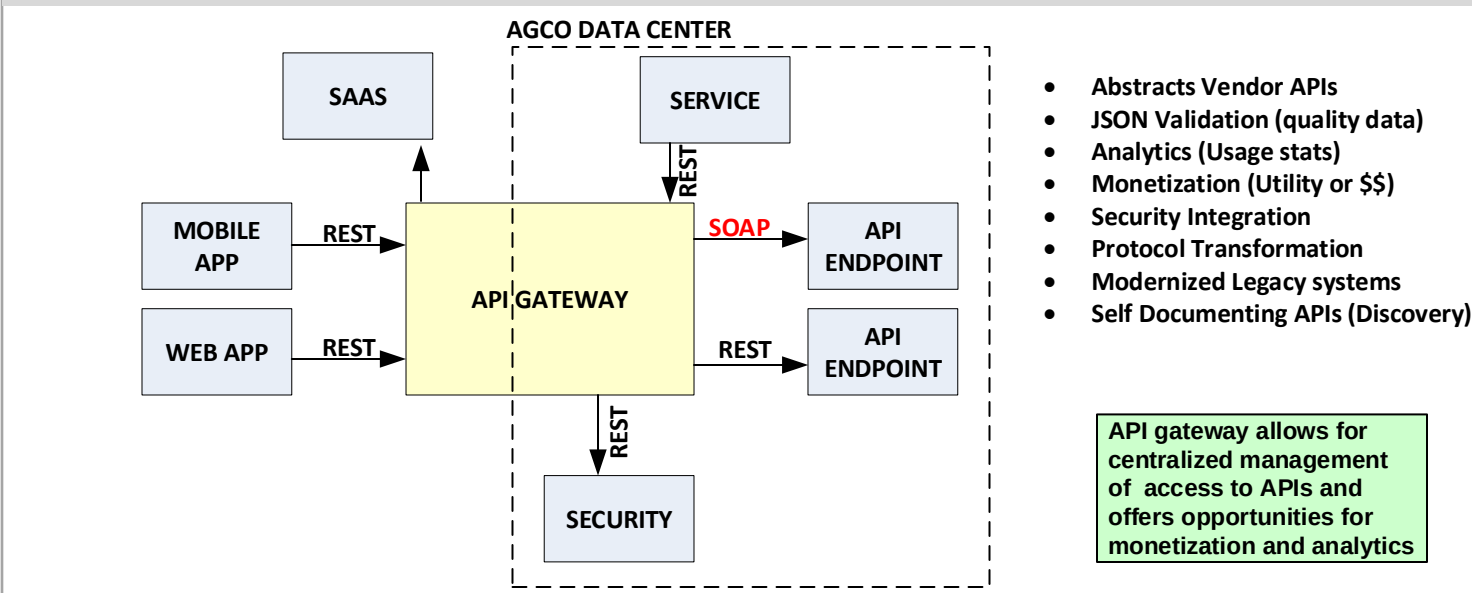

B: Providing an simple, clear and quick way developers and 3rd parties to discover and use our APIs will be critical in promoting their usage and adoption.

C: As we move towards a more internet and mobke focused architecture we want to avoid refactoring existing SOAP based web services or other legacy systems we need a solution to bridge these and expose in a client neutral way.

CURRENT SITUATION

IDEAL SITUATION

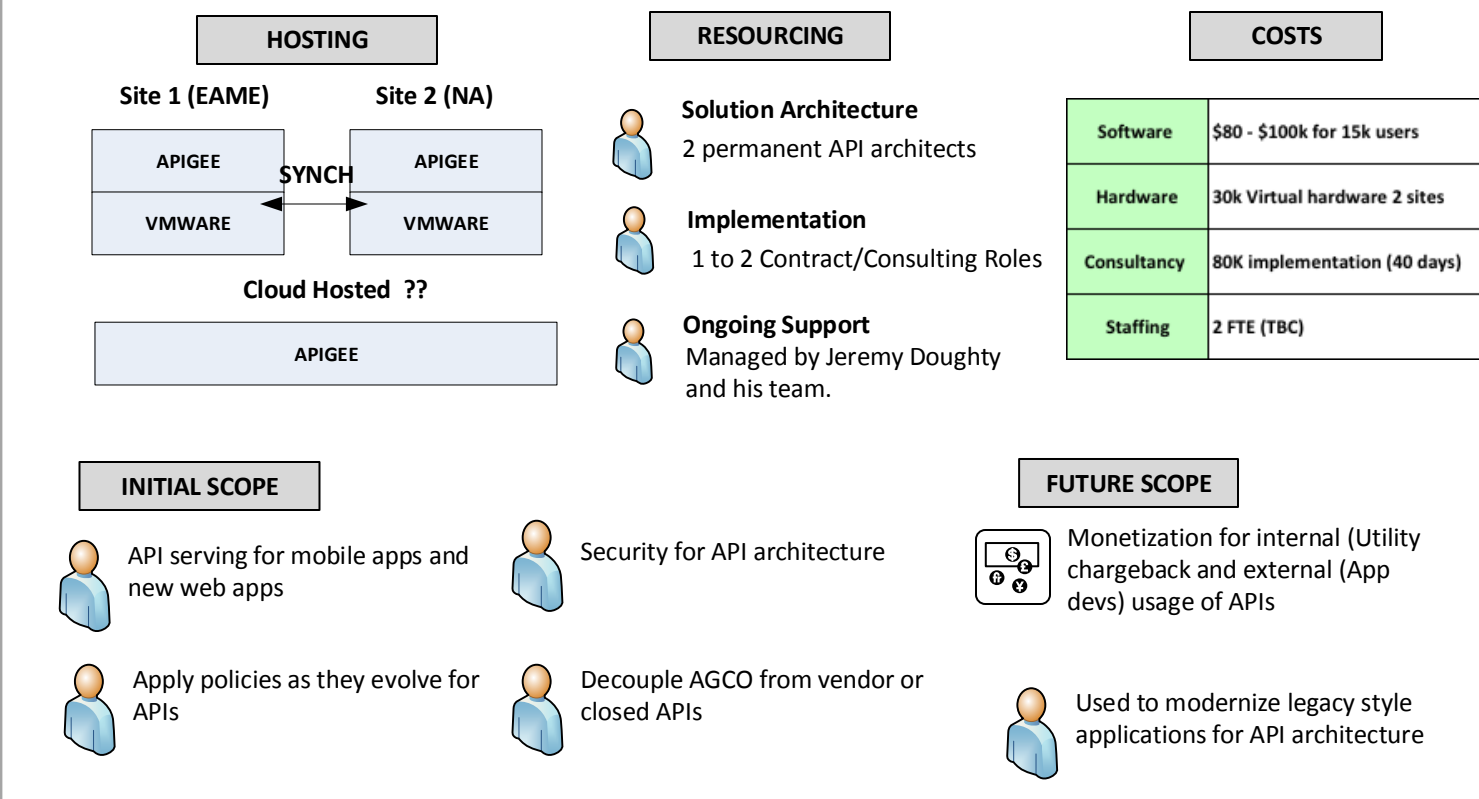

EVALUATION

ID	OPTIONS & DESCRIPTION	ARCHITECTURE OVERVIEW	QUALITY																OVERALL	RANK
			RESTful API (Simple API)	API Integration	Cloud Only Solution	On-Premise Solution	SSO	Self-Service (API support) (Over-the-Counter)	Scalability	High Availability	Federation (Legacy)	Federation (New)	SCIM Support	OAuth2	User Self-Service Provisioning	Password Management	Basic User Provisioning	Full Identity Management Support		
		Description	Lightweight, easy to use, and easy to integrate	Supports various protocols and standards	Simple to use and easy to integrate	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications	Can be used for a wide range of applications
